WIFI - Cloud Dataloggers

These dataloggers connect to the internet via wi-fi and send their data to the cloud based software for viewing on any internet enabled device, ie computer, laptop, phone etc.

They are available in two styles, with screen or without, both log temperature, humidity, Lux light levels. They uniquely store data when not connected to a wifi network and can therefore be used for stand-alone logging in an area that has no wifi, ie store, basement etc and are then automatically download data when taken to a wifi point. Optional version available with built in SIM card to send data via mobile phone network, ideal for live readings from a remote site, store etc.

They can be connected to your local wifi network or if you don't have wifi or don't want to involve your own IT / wifi then we can provide a wifi router hub that uses the mobile phone network to transmit the data to the cloud and by-pass any local network or IT involvement.

Free cloud software subscription and phone apps. Email and phone app alerts if user defined alarm limits have been exceeded and if the logger goes offline. Option alarm text messaging or automated phone call available at low costs.

Three years of free data storage at 30 minute logging intervals. Export the data to CSV or PDF

Uses standard AA batteries which will last approximately 6 – 12 months (depending on log interval). Battery voltage and wifi reception is also logged. Mains power adapters available.

300,000 sensing records can be logged when the unit is not online.

Optional flying lead probes: Temperature & Humidity (screen logger only), ie for show cases and a Temperature only probe ie for Fridge, freezers etc. External version available too.
